STIC-Biotech/ChemL	ib 174760
From: Sent: To: Subject:	Ramirez, Delia Tuesday, December 20, 2005 4:43 PM STIC-Biotech/ChemLib 10/049,750
Hi,	
I would like to request the fo	ollowing search:
1. a standard search of SE	Q ID NO: 11, 13 and 14 in the protein databases (commercial & interference)
Thank you very much,	
Delia M. Ramirez, Ph.D. Patent Examiner Recombinant Enzymes-Art Unit 1 USPTO 400 Dulany Street, Remsen Bldg Alexandria, VA 22314 (571) 272-0938 delia.ramirez@uspto.gov

                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                셤
                                                                                       The present sequence represents a decoxyribokinase enzyme. This enzyme is involved in the biosynthesis of decoxyribonucleosides, and is used in the method of the invention. The specification describes a method for the invitro enzymatic synthesis of decoxyribonucleosides. The method comprises reacting decoxyribose 1-phosphate and anucleobase to form a decoxyribonucleoside and an inorganic phosphate. Enzymes which may be used in the method of the invention include thymidine phosphorylase, purine nucleoside phosphorylase, phosphorpencose mutase, phosphorpencose aldolase, fructose 1,6-diphosphate aldolase, decoxyribokinase, and nucleoside 2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   360

The invention relates to a library of DNA fragments of Escherichia colistrains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) and encoded proteins (ABB52549-ABB52994-ABB53994) of nature B2/D4A. The polynucleotides have potential antinflammatory, antibacterial and immunosuppressive activity as part of pharmaceutical compositions used to treat, palliate or prevent extra-intestinal E. colinflationis. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal infection that include systemic and non-diarrhoeal infections such as septicaemia, pyelonephritis and meningitis this is particularly advantageous as bacterial resistence is increasing with the more frequent use of broad spectrum antibiotics
                                                                                                                                                            780
                                                                                                                                                                                                                                                                 840
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A library of DNA fragments of Escherichia coli strains for the phylogenic determination of a given strain comprises polynucleotides of nature B2/D \pm

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to new Proteus mirabilis polypeptides and polymucleotides. The invention also relates to antibodies against the polypeptides, amethod for producing the polypeptides, amethod of immunishing an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for antibuty. The polypeptides and polynucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 aB

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant construct and growing the transforming a plant with the recombinant DNA construct and growing the transforming a plant with the recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with increased resistance to herbicides, extreme osmocia conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of protein yield and/or phosphorus use and/or uptake, by modification of protein yield and/or providing improved plant growth and development under at least one stress conduction. This sequence represents a bacterial polypeptide used in the printed specification but was obtained in electronic forms of form part of the printed specification but was obtained in electronic forms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              23

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypoptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant comprising an improved property comprises transforming a plant with the recombinant DNA construct and growing the transforming a plant with the compliant DNA construct is useful for improving plants with the recombinant DNA construct is useful for improving plants with improved plant properties, e.g. improved cold, heat or drought tolerance, colerance to herbicides, extreme osmotic conditions apthogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or providing improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress providing improved plant growth and development under at least one stress condition. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form the form tells and to the sequence the form the printed specification but was obtained in electronic forms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             186
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           43
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            24 ProGlyGluThrLeuGluAlaProThrPheGluMetGlyCysGlyGlyLySGlyAlaAsn

The inventional in a plant cell, where the promoter compirator or promoter functional in a plant cell, where the promoter compiration of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant comprising the recombinant DNA construct and growing the transformed plant with the recombinant DNA construct and growing the transformed plant which the recombinant DNA construct is useful for improving plant with the recombinant DNA construct is useful for producing plants with the improved plant properties, e.g. improved cold, heat or drought tolerance. The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved plant growth and development under at least one stress content, improved plant growth and development under at least one stress condition, improved lignin production or improved glaatcomannan condition, improved lignin production or improved glaatcomannan condition, improved lignin production or improved dalactomannan condition. Note: The sequence data for this patent did not form part of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic communities.
                                                                                                                                                                                                                                                                                                  New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        187 GATATITITGCCGACAACACCATTCGTAATCTCGAATCCTGGGGATCAATACGACGTAT 246

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant cauch as maize or soybean. The method of producing a transformed plant canced property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the coplynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for improving plants with improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress conduction, this sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence date for this patent did not form, the form at norm, at noth, and the harmon provided the printed specification but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    186

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by a canes. The disorders include SAPHO syndrome (synovitis, acne, puerulosis, Mypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies polypeptides may be used as antigens in the production of antibodies contactive therefore treat P. acnes infections. The acnes polypeptides and cherraning P. acnes presence, for example, by clasmostic agents for determining P. acnes presence, for example, by clasmostic agents for determining P. acnes presence, for example, by clasmostic agents form man activity of P. acnes presence for example, by chis patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at vaccinating against and diagnosing infections, especially useful for English 22062; 1069pp; treating acne vulgaris. encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polymuclectides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polymuclectide of the invention, antibodies against polypeptides of the invention; fusion proteins comprising a polypeptide of the invention, a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein. 216 9 236 720 256 780 840 296 invention relates to an isolated polynucleotide (ACF64435-ACF64733) :::||| :::||||||:::||| LeuGlySerArgGlyAlaMetTrpAlaHisAlaGluGlyArgLysIleIleLysAlaPro ATGGGCGAGAAAGGCGCGCTGTGGATGACGCGTGACCAGGAAGTCCATGTTCCGGCGTTT 721 AGAGTGAACGCTGTTGATACCAGCGCGCGGCGATGCCTTTATCGGCTGTTTCGCGCAT 257 valValGlnAlaValABpThrThrGlyAlaGlyABpAlaPheIleGlyCyBPheAlaLyB TTTGTACCTAATGAAACCGAGCTGGAAATATTAACGGGTATGCCAGTGGATACCTATGAC CATATTCGCGCAGCGCCACGTTCGCTGGTAGATAAAGGGCTGAACAATATTATTGTCACC ů Mitcham JL, Skeiky YAW, Persing DH, Bhatia A, Maisonneuve JL; Zhang Y, Wang S, Jen S, Lodes MJ, Benson DR, Jones R, Carter Barth B, Vallieve-Douglass J; Propionibacterium acnes predicted ORF-encoded polypeptide #22062. continue cotides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit cor detecting or determining the presence or absence of P, acnes in a patient; and a method for inhibiting the development of P, acnes in a continue to patient; and a method for inhibiting the development of P, acnes in a corp. Presenting cells that express the proteins. T cell populations or antigen-presenting cells that express the proteins. T cell populations or antigen-presenting cells that express the corp. The polymocleotides can also be used as probes or primers for uncleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P, acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present cadence represents a polypeptide predicted to be encoded by an ORF (open reading frame) contained within the P, acnes polymocleotides of the cinvention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/published\_pct\_sequences ACCIATGIAGAAAAAGIACCGIGIACCAGCAGCGCGIAGCGCCGATITICGICAACGCC 300 ||||:::||| ::: ThrHisValLeuArgThrAsp---AlaSerSerGlyValAlaProllePheValAspPro 116 480 176 CCCAAAGAAGGGGAAACTCTGGAAGCGCCGGCGTTTAAAATCGGCTGCGGCGGAAAAGGG 120 GGCGACGATATTTTGCCGACAACACCATTCGTAATCTCGAATCCTGGGGGATCAATACG 240 ATCGATCGCGCGCGGAAGATTTAAAAAATGCCAGCTTATTGTTCTGCAACTGGAAGTT 420 GCGAACCAGGCCGTGGCGGCCGCTAAGCTCAAATCAAAAGTATTGATGTTGACCAAAGTG 180 57 301 AACTCCAGCAACAGCATTCTGATCATCAAGGCGCTAACAAGTTTCTCTCGCCGGAAGAT CAGCTTGAAACGGTTTATCACGCAATAGAATTTGGCAAGAAACACGGGATTGAAGTGTTA TTANACCCTGCGCCAGCATTACGGGAATTAGATATGTCTTATGCCTGTAAATGCGATTTC 321 168 48 75 Conservative: Mismatches: Indels: Length: Matches: Gaps: (1-321)US-10-049-750-11 (1-921) x ABM57386 831.50 73.97% 57.53% 52.30% Percent Similarity: Best Local Similarity: Sequence 321 AA; Alignment Scores: 18 61 38 58 181 78 241 86 361 421 121 481 Query Match: DB: 8888888888888888888888888 셤 ò 셤 8 셤 ઠે g ò 요 셤 δ ò 셤 ò 셤 ઠે 8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polymucleotide encoding a polymptide from a microbial source. The invention also relates to a transformed plant transformed plant having an improved property. The plant is a crop plant transformed plant having an improved property. The plant is a crop plant baving an improved property comprises transformed plant thaving an improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for improving plants with improved plant properties, e.g. improved cold, heat or drought tolerance,

tolerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress ordition. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    486
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               546
                                                                                                                                                                                                                                                                                                                                                                                                                                                 126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             186

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, pseudomonas aeruginosa and Enterococcus facealla. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The bused to screen compounds in rational drug discovery programmes. The bused caids which are required for cell proliferation in a wide variety of organisms. The present sequence is also useful to screen for homologous cucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent electronic format directly from WIPO at the valous obtained in electronic format directly from WIPO at the valous obtained in the wipo int/pub/published_pot_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therappy of pathological conditions, as molecular traspets for diagnosis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P aeruginosa nucleic acid, as components of effective antibacterial targets, as templates for antibacterial dargs, including anti-P. aeruginosa-derived peptides or polypeptides, components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences AB067826-C. RB084396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequences AAB73494-AAB73515 represent novel human transferase proteins HTFS-1 to HTFS-42, and sequences AAH23801-AAH23812 represent cDNAs encoding them. The proteins play important roles in the regulation of cellular signalling and proteins play important roles in the regulation of cellular signalling and proteins play important roles in the regulation of cellular signalling and proteins play important roles in the regulation of cellular signalling and proteins play ind to an HTFS protein.

Compositions which modulates the activity of an HTFS protein. HTFS protein.

Compositions of genetic construct encoding an HTFS protein, HTFS agonist or antagonist, or genetic construct encoding an HTFS protein are useful for treating a disease or condition associated with decreased or increased expression of functional HTFS. Disorders which may be treated using such compositions include cell proliferative disorders and immune disorders.

Compositions include cell proliferation, AIDS, Addison's disease, brain and uterus cancer), inflammation, AIDS, Addison's disease, cancers, inflammation, and and immune disease, atopic dermatitis, disbetes mellitus, multiple sclerosis, thematolia archaritis, partemic lupus erythematosus, thrombocytopenia, and cancer, haemodialysis, extracorporeal circulation, trabuma and composition probes encoding HTFS proteins are useful for creating transgenic cancer, haemodialysis, extracorporeal circulation, level and to generate or hybridisation probes useful in mapping the naturally occurring genomic sequences. HTFS, and its catalytic or immunogenic fragments are useful for screening techniques. Antibodies which specifically bind HTFS may be

The present invention relates to a polynucleotide for preventing, treating or diagnosing a disease in an individual. The composition or the polypeptide, polynucleotide or RNA precursor, or antibody is useful for diagnosing, preventing or treating diseases (e.g. cell proliferative diseases such as cancer) in an individual. These may also be used for identifying substances capable of binding to or modulating the function of the polypeptide, capable of affecting the function of the corresponding gene, or capable of inhibiting the cell division cycle or cell cycle progression, preferably mitosis and/or meiosis. The present sequence represents an antagonist of cell cycle progression protein

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 14043, Application US/09489039A
Patent No. 6610836
GENERAL INFORMATION
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: NUMBER: US/09/489,039A
CURRENT APPLICATION NUMBER: US 60/117,747
PRIOR FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
SEQ ID NO 14043
LENGTH: 330
TYPE: PRT
ORGANISM: Klebsiella pneumoniae
                                                                                                                                                                                                                                                                                                      |||||||:::||||

Sequence 7498, Application US/09543681A

Patent No. 6605709

GENERAL INFORMATION:

APPLICANT: GARY BRETON

TITLE OF INVENTION: UNCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIT

TITLE OF INVENTION: UNCLEIC ACID AND THERAPEUTICS

TITLE OF INVENTION: UNMERR: US 60/128,706

PRIOR PEDLICATION UNMERR: US 60/128,706

PRIOR PEDLICATION UNMERR: US 60/128,706

Sequence 4841, Application US/09543681A

Patent No. 6605709

Patent No. 6605709

GENERAL INFORMATION:
APPLICANT: GARY BRETON

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABI:
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 2709.1002-001

CURRENT APPLICATION NUMBER: US/09/543,681A

CURRENT FILING DATE: 2000-04-05

PRIOR APPLICATION NUMBER: US 60/128,706

PRIOR FILING DATE: 1999-04-09

NUMBER OF SEQ ID NOS: 8344

US-09-134-00C-4524

j Sequence 4524, Application US/09134000C

patent No. 6617156

GENERAL INFORMATION:

APPLICATION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO

TITLE OF INVENTION: ENTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: US-032

CURRENT FILING DATE: 1998-08-13

CURRENT FILING DATE: 1998-08-13

PRIOR PELICATION NUMBER: US 60/055,778

PRIOR FILING DATE: 1997-08-15

NUMBER OF SEQ ID NOS: 6812

SOFTWARE: Patentin version 3.1

LENGTH: 529
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240

Sequence 3946, Application US/09107532A
Patent No. 6583275
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               169 ATTGAAGTGTTATTAAACCCTGCCAGCATTACGGGAATTAGATATGTCTTATGCCTGT 528

Sequence 1139, Application US/10238075

Sequence 1139, Application US/10238075

Publicaction No. US20030148324A1

GENERAL INFORMATION:

APPLICANT: I.N.S.E.R.M.

TITLE OF INVENTION: Bolymucleotides which are of nature B2/D+ A- and which are isola TITLE OF INVENTION: Bolymucleotides and of the FILE REFERENCE: BLANDINE

CURRENT APPLICATION NUMBER: US/10/238,075

CURRENT APPLICATION NUMBER: 0003145

PRIOR FILING DATE: 2000-03-10

NUMBER OF SEQ ID NOS: 1576

SOFTWARE: PatentIn version 3.1
